1. Simple Reflex Vacuum Cleaner Agent

Python practical code

```
# Initial condition of two rooms
rooms = {
    "A": "Dirty",
    "B": "Dirty"
}

location = "A"

# Vacuum cleaner agent
def vacuum_agent(location):
    print("\nCurrent Room:", location)
    print("Percept:", rooms[location])

    if rooms[location] == "Dirty":
        print("Action: Clean the room")
        rooms[location] = "Clean"
    else:
        print("Action: Move to the next room")

# Clean rooms until all rooms are clean
while "Dirty" in rooms.values():
    vacuum_agent(location)

    if location == "A":
        location = "B"
    else:
        location = "A"

print("\nFinal Room Status:")
for room, status in rooms.items():
    print(room, ":", status)

print("All rooms are clean.")
```
