6. ABC Bank Services Menu

Python practical code

```
bank = {
    "Account": ["Savings Account", "Current Account"],
    "Loan": ["Home Loan", "Personal Loan", "Car Loan", "Education Loan"],
    "Card": ["Credit Card", "Debit Card"],
    "Insurance": ["Life Insurance", "Health Insurance"]
}

choice_count = {1:  0, 2:  0, 3:  0, 4:  0}

while True:
    print("\n===== ABC Bank Services =====")

    options = list(bank.keys())

    for i in range(len(options)):
        print(i + 1, ".", options[i])

    print("5. Exit")

    choice = int(input("Enter your choice: "))

    if choice == 5:
        print("Thank you for using ABC Bank!")
        break

    if choice not in range(1, 5):
        print("Invalid choice!")
        continue

    if choice_count[choice] >= 2:
        print("You have already selected this option 2 times.")
        continue

    choice_count[choice] += 1

    service = options[choice - 1]

    print("\n", service, "Services:")

    for item in bank[service]:
        print("-", item)
```
