7. Number Guessing Game

Python practical code

```
import random

number = random.randint(1, 10)

while True:
    guess = int(input("Enter number: "))

    if guess == number:
        print("Correct Guess!")
        break

    elif guess < number:
        print("Guess Higher")

    else:
        print("Guess Lower")
```
